Battery No-Corrode Gel

Technical Data Sheet

Rev 12/08

PRODUCT DESCRIPTION: Battery Protector stops terminal corrosion and increases battery life. Use on battery terminals, in or out of storage. Prevents harmful corrosion to battery terminals and electrical connections. A film-coating acid reducing compound that is applied to battery terminals, cable ends, connectors, hold-downs, clamps and etc. It is a premium quality, extreme pressure, multi-purpose aluminum complex grease that has a smooth tacky consistency and is red in color. It has an extremely high dropping point and gives outstanding performance in high temperature applications.

WORKS BEST ON: For all storage batteries used in cars, trucks, boats, etc.

PRODUCT FEATURES:

- Excellent Water Resistance
- Ensures maximum batter power
- Color: Red
- Sets as a stiff gel for long life battery protection.
- Chemical Solvent Resistance: automotive fluids such as oil, grease and solvents.
- Storage: Store in a cool, dry environment.

SURFACE PREPARATION: Thoroughly clean by wire-brushing terminal parts, cable ends, hold-down clamps and etc. Remove dust, dirt and etc.

REMOVAL METHODS:

- Before Cure: Wipe off excess with a cloth.
- After Cure: Remove with a brake and parts cleaner product.

HELPFUL HINTS:

See MSDS for more complete information, safe handling instructions and first aid.

Non-Regulated

Part Numbers: 00911
